## Tools for Life

Dualtech Center was established in 1982 to provide **skills education** and **values formation** to the youth thereby addressing the problem of poverty.

Dualtech thus pioneered the Dual Training System in the Philippines adapting the German way of technical education to the local setting. The Dual-Training System (RA7686) fosters partnership between schools and industry. It facilitates better employment through a structured "learning while doing" approach and gives appropriate formation through cycles of theory and practice.

As of end of 2014, Dualtech has graduated over 10,000 students inclusive of almost 400 aircraft mechanics that from 2001 to 2007 were trained together with LufthansaTechnik Philippines. Among these graduates are those who have become entrepreneurs, general managers, supervisors, foremen, technicians, mechanics, whom the school trained to be responsible Christian professionals (two have become priests).

# Tools for Life

Dualtech equip its students with the facility to work and serve so that they become productive for themselves, their family, their industry and their community.

Through the learning sessions and shop exercises and work projects where they are drilled with the proper use of tools and equipment they also acquire a proper sense of respect and care for material things.

As they begin to apply their skills at home they also earn trust and begin to serve their neighbors. This was how some graduates begun their entrepreneurial paths - by doing repairs at home and eventually their village. In order to provide therefore similar opportunities to current students, it maybe a good chance for them to receive their own "tools sets" rather than borrow from the school.

We ask sponsors to invest in these young people by donating to them their "tools-for-life"...
